

EASY PRINT GLOSS

SILVER & WHITE PET FOAM BOARD

PRODUCT – EASY PRINT GLOSS is an expanded polystyrene board with a unique combination that produces an exceptional product with outstanding qualities and benefits. The exterior face is a brilliant White or Silver UV Corona treated PET Film suitable for all UV Flatbed printers and screen-printing where consistency are of paramount importance, these boards are printed directly onto by large format digital print or screen print machines or may be used as a base on which to mount pre-printed posters.

COMPOSITION - SURFACE - Premium quality gloss finish is available in White 240 GSM or Silver 350 GSM PET coating and is UV corona treated for a magnificent print quality finish. The surface is also PH neutral. It offers outstanding brightness, smoothness and stiffness delivering reliability and efficiency in production, even through demanding printing applications. The face is 100% totally recyclable, non-biodegradable, contains no CFC's and contains a flame-retardant additive to inhibit a zero spread of flame. The coated product is acceptable in the normal pre and post consumer waste stream.
PET will break down in time, but cannot be considered B10 - degradable in the short (1 year) term.

CORE- Premium Australian made "M" grade expanded polystyrene and is manufactured completely CFC free. The light weight polystyrene core contains a flame-retardant additive to inhibit a zero spread of flame.

KEY BENEFITS - Why Choose EASY PRINT GLOSS?

The only in line manufactured Australian Made gloss foam board.

Has an excellent reputation for great performance and consistent quality.

Bright white and silver gloss face is the brightest board of its kind and great for digital and screen-printing where an exceptional print is required.

Silver Gloss can be used when a 3 dimensional look is required.
